

# Police Siren Light Bar

**A (RED)** - connects to battery positive 6v~12v  
**B (BLACK)** - connects to battery negative  
**L01 - WHITE**                      **L03 - GREEN**  
**L02 - GRAY**                      **L04 - YELLOW**

### Technical Specifications:

- \* working voltage: 6v ~ 12v
- \* current: 40mA (maximum)
- \* 6 wires connections
- \* 10 + 1 patterns to select
- \* Available in combinations of 3 colors: **RED, AMBER, BLUE**

### Usage Notes:

- \* Not for kids, small parts will choke if swallowed
- \* Use voltage power as stated
- \* This is not a water proof Unit
- \* For stable operation, use direct from battery
- \* When Customers decided to use power source else where to power unit, example BEC, radio receiver, etc, you must ensure that your system (cars, trucks, kits, etc) is well "cleaned from signal interference". Signal noises and/or interference will affect to change the Unit's patterns
- \* To change patterns
  - \* Touch L01 L02 L03 L04 wires to BLACK wire to change pattern
  - \* Do NOT touch L01 L02 L03 L04 wires to the RED wire, it may damage the Unit
- OR
  - \* use a metal material to touch 2 pins at
- \* Ensure the insulator film covers the base of the circuit to prevent short circuit.
- \* Do NOT attempt to open the Unit
